The growing data stated in these specifications have been observed in Fréjus (France) using culture techniques described on our website www.cyclamen.com. The INDIAKA® culture timing is shorter in a Northen climate type: 28-30 weeks. Please contact us for ajustements according to your area of production.

VARIETY FEATURES

TWO-TONE PETAL COLOUR: a question of day-length and temperature

- **Average-day:**
  Even proportion of colour and white
- **Flowering:** mid-autumn/winter

- **Long-day:**
  The colour prevails
- **Flowering:** spring/summer/early autumn

- **Short-day:**
  The white prevails
- **Flowering:** winter

In a cool climate: the intensity of the INDIAKA® varieties' white/colour contrast depends on the temperature; the colder it is, the more intense the colour contrast.

For good two-tone petal colour, plan your sales period from October. (Southern Hemisphere plan from April-May)

On average, we count around 2% of straight colours, beginning of flowering.
